# H4 environmental-variable selection

Step 4: outcome-blind PC1 representative per category (max |PC1 loading|; Jolliffe 1972). Heat terms kept for the four equations (MRT dropped).

| | | |
|---|---|---|
| **STEP 5**<br>**Within-person term grid**<br>**(4 equations; grouped term order)** | sound + (humidity x sound) + (air temperature x sound) + (apparent wind x sound) \| GVI + lux + atmo_pm2.5_avg + exertion (vector magnitude) + mean radiant temperature \| air temperature + humidity + apparent wind + Phase | max VIF = 2.22 |
| | sound + (HUMIDEX x sound) \| GVI + lux + atmo_pm2.5_avg + exertion (vector magnitude) + mean radiant temperature \| HUMIDEX + Phase | max VIF = 1.20 |
| | sound + (PET x sound) \| GVI + lux + atmo_pm2.5_avg + exertion (vector magnitude) + mean radiant temperature \| PET + Phase | max VIF = 1.96 |
| | sound + (UTCI x sound) \| GVI + lux + atmo_pm2.5_avg + exertion (vector magnitude) + mean radiant temperature \| UTCI + Phase | max VIF = 2.40 |

Phase: sum-to-zero coding of 4 phases (WalkG, WalkU, BikeG, BikeU); each compared with the mean of all phases, no reference phase.
